

Parasitologie

ON BAT ECTOPARASITES (NYCTERIBIIDAE, STREBLIDAE, SIPHONAPTERA, MESOSTIGMATA AND IXODIDAE) FROM CHREA NATIONAL PARK (CENTRAL ATLAS MOUNTAINS), ALGERIA

par

Djamel BENDJOURDI^{1*}, Wafa YEDOU¹, Assia BENELDJOUZI²,

Noureddine MECHOUK³ and Mohammed Lamine BENDJEDDOU⁴

Eleven species of ectoparasites were recovered from six bat species within Chréa National Park (Central part of Atlas Mountains, Algeria). Six species belong to the class Insecta and four species to class Arachnida. Insecta is represented by two orders, namely Diptera and Siphonaptera. Six species of dipteran ectoparasites were identified, belonging to Nycteribiidae (*Nycteribia latreillii*, *N. schmidlii*, *N. pedicularia*, *Penicilidium dufouri*, *Phthiridium biarticulatum*) and Streblidae (*Brachytarsina falvipinnis*). One species of Siphonaptera, *Araeopsylla gestroi*, was identified. Four species of Acari were identified as *Ixodes vespertilionis*, *I. ricinus*, *Eyndhovenia euryalis* and *Spinturnix myoti*. Two host-parasite associations are newly reported for Algeria: *Rhinolophus ferrumequinum* with *Araeopsylla gestroi*, and *Eptesicus isabellinus* with *Ixodes ricinus*.

**Sur les ectoparasites des chauves-souris
du Parc national de Chréa, Algérie**

Nous présentons de nouvelles données sur les ectoparasites des chauves-souris du Parc National de Chréa (partie centrale des montagnes de l'Atlas, Algérie). Onze espèces, dont sept espèces d'insectes appartenant à l'ordre des Diptera (*Nycteribia latreillii*, *Nycteribia schmidlii*, *Nycteribia pedicularia*, *Penicilidia dufourii*, *Phthiridium biarticulatum*, *Brachytarsina falvipinnis*) et des Siphonaptera (*Araeopsylla gestroi*) et quatre espèces d'Acarina (*Ixodes vespertilionis*, *Ixodes ricinus*, *Eyndhovenia euryalis*, *Spinturnix myoti*) ont été retrouvées chez six espèces de chauves-souris. Ainsi, deux nouvelles associations hôte-parasite sont signalées en Algérie : *Rhinolophus ferrumequinum* et *Araeopsylla gestroi*, *Eptesicus isabellinus* et *Ixodes ricinus*.

Mots-clés : Chauves-souris, ectoparasites, Parc national de Chréa, Algérie.

Introduction

Arthropod ectoparasites are small organisms that live and feed on the skin of various hosts, some of which are known to be potential vectors of diseases (HOPLA *et al.*, 1994). According to RITZI & WHITAKER (2003), mammals are known hosts of ectoparasites, especially bats and rodents. Bats, the only mammals capable of true powered flight, are widely distributed and have a broad range of habitats, which makes them natural hosts of many ectoparasites (DICK *et al.*, 2003; BENDJEDDOU, 2017). They are excellent models for studying host-parasite relationships, because their taxonomy and behaviours are extremely diverse (KURTA *et al.*, 2007). In Algeria, assessment of the bat ectoparasite fauna is far from complete. Recently, BENDJEDDOU *et al.* (2017) provided a list of 22 species of ectoparasites, including Nycteribiidae, Streblidae, Siphonaptera, Heteroptera, Mesostigmata, Argasidae and Ixodidae, associated with 19 bat species. However, there remains a lack of data since most studies treat the north-east, south-east and southern parts of the country. Till now, the bat soft tick *Argas vespertilionis* is the only species that has been reported from the central part of Algeria (BENDJEDDOU *et al.*, 2017).

The present study documents the ectoparasites associated with bats collected from Chréa National Park (central part of the Atlas Mountains), Algeria.

Material and methods

Study area

Chréa National Park is located in central area of Algeria (36°19' – 36°30'N and 2°38' – 3°02'E), about 40 km south-west of Algiers, just south of the village of Blida (Figure 1). It covers around 27 000 ha of higher mountains (900-1550 m) in the Mitidja area. The climate is fresh and humid, with a mean annual rainfall of 950-1200 mm, monthly mean of temperatures between 3-7°C in winter and 18-23°C in summer; snow is relatively frequent (50-100 cm annually) (SBABDJI, 2012). The

Bat ectoparasites from Chrea National Park, Algeria

park includes a mixture of different ecosystems, including evergreen sclerophyllous forests, lakes, mountains, woodlands or scrubs. Bats were studied at three localities within Chréa National Park:

- Hammam Melouane cave: ($36^{\circ}25'36''N$ - $2^{\circ}58'24''E$ – 887 m a.s.l.) a small cave, 7 m high, 4 m wide and about 8 m deep. The surrounding area corresponds in part to native woodland of Atlas Cedar;
- Chiffa tunnels (gorges de la Chiffa): ($36^{\circ}24'0.01''N$ - $2^{\circ}46'0.01''E$ – 239 m a.s.l.) abandoned tunnels dating from the colonial period;
- Bouarfa: ($36^{\circ}26'04''N$ - $2^{\circ}50'08''E$ - 487 m a.s.l.) semi urbanized habitat.

Bats and ectoparasites collection

Bats were collected from three localities within Chrea national park, during the summers of 2016 and 2017. Both hand-nets and mist-nets were used to capture

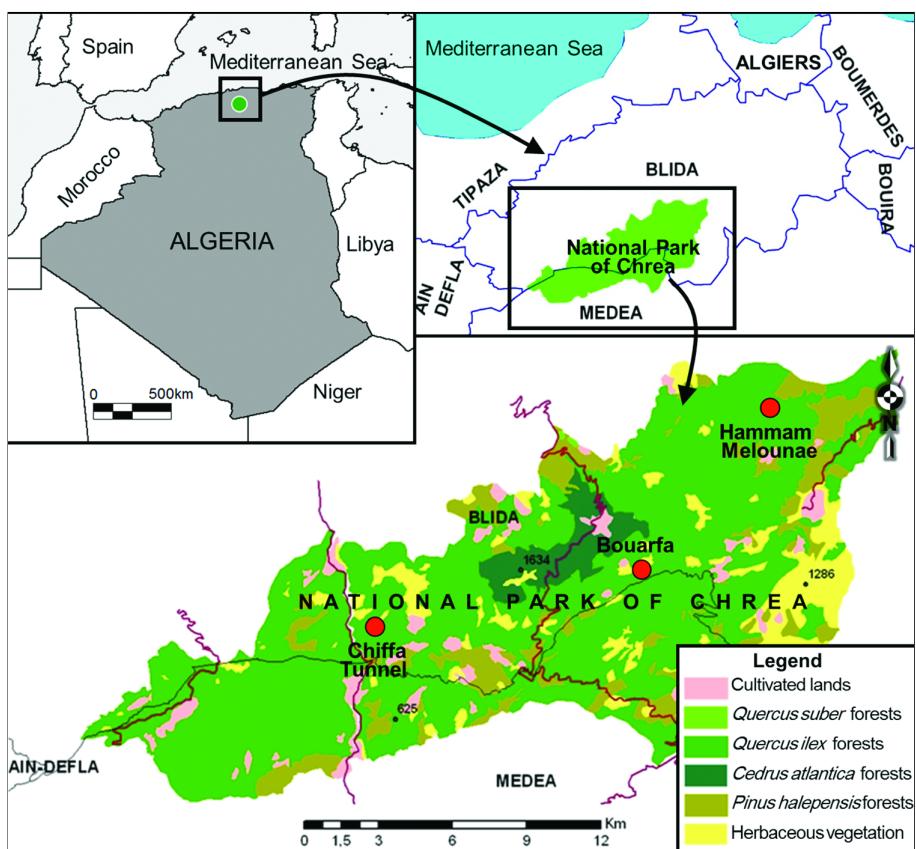

Figure 1

Map showing location of Chrea National Park and the study sites.
Carte de localisation du Parc national de Chréa et des sites d'étude.

Bulletin de la Société zoologique de France 142 (2)

bats on underground roots and in open habitats. Bats were identified according to DIETZ & VON HELVERSEN (2004) and DIETZ (2005). Each bat was individually examined and its ectoparasites were stored and labelled in a vial containing 75% alcohol. “N” and “NP” designate the number of bats examined and the number of recovered parasites, respectively. Collected ectoparasites were identified using HOPKINS & ROTHSCILD (1956), RUDNICK (1960), DUSBABEK (1962), USINGER (1966), RADOVSKY (1967), THEODOR (1967), BEAUCOURNU (1961) and HŮRKA (1982).

Results and discussion

Bat species

A total of 61 bats, representing six species (Family Rhinolophidae: *Rhinolophus blasii* (N=05), *Rhinolophus ferrumequinum* (N=40); Family Vespertilionidae: *Eptesicus isabellinus* (N=04), *Myotis punicus* (N=03), *Pipistrellus kuhlii* (N=08); Family Miniopteridae: *Miniopterus schreibersii* (N=01)), were collected from the three localities in Chréa National Park (Table 1).

Ectoparasites

Eleven species of ectoparasites, belonging to three orders, were recovered from five bat species from Chréa National Park. Six species of bat flies (Diptera: Streblidae) were recovered: *Brachytarsina falvipinnis* and (Diptera: Nycteribiidae) *Nycteribia latreillii*, *Nycteribia schmidlii*, *Nycteribia pedicularia*, *Penicilidia dufouri* and *Phthiridium biarticulatum*. The order Siphonaptera was represented by a single species (*Araeopsylla gestroi*) while two ixodid ticks (*Ixodes vespertilionis* and *Ixodes ricinus*) and two species of Mesostigmatid mites (*Eyndhovenia euryalis* and *Spinturnix myoti*) were collected (Table 2).

Class Arachnida

Family Ixodidae

- *Ixodes vespertilionis* (Koch, 1844)

We found this tick on three different bat species: *Rh. blasii* (N=2, NP=2), *Rh. ferrumequinum* (N=8, NP=1) and *M. schreibersii* (N=1, NP=1), in Chiffa tunnels, 10 May 2017. **Remarks:** *Ixodes vespertilionis* is distributed in Eurasia, Africa and Australia (KOLONIN, 2007). It parasitizes many bat species of the families Rhinolophidae and Vespertilionidae (KRISTOFIK & DANKO, 2012). BENDJEDDOU *et al.* (2016) studied the seasonal infestation of *I. vespertilionis* on *M. punicus* at two sites in northeastern Algeria. This tick was also recorded from four other Algerian bat species: *M. emarginatus*, *M. capaccini*, *Rh. ferrumequinum* and *M. schreibersii* (BENDJEDDOU *et al.*, 2017; KHELFAOUI *et al.*, 2018).

* New host-parasite record.

Bulletin de la Société zoologique de France 142 (2)

• *Ixodes ricinus* (Linnaeus, 1758)

This tick species was collected on two bat species: *E. isabellinus* (N=4, NP=1) and *P. kuhlii* (N=8, NP=2), at Bouarfa, 17 June 2016. **Remarks:** This tick species is mostly associated with artiodactyls and reptiles. In Algeria it was already recorded on lizard species (SOUALAH-ALILA *et al.*, 2015). It has also been found to parasitize some bat species in Europe and North Africa, but this was considered accidental (ŠEVČÍK *et al.*, 2010; BENDJEDDOU *et al.*, 2017). *E. isabellinus* and *P. kuhlii* are thus new hosts for this tick species, although this association is accidental.

Family Spinturnicidae

• *Eyndhovenia euryalis* (Canestrini, 1884)

This mite was found on *Rh. blasii* (N=3, NP=4) in Chiffa tunnels, 7 July 2017. **Remarks:** This mite was reported earlier on *P. gaisleri* and *Rh. blasii* (BENDJEDDOU *et al.*, 2017). It was first reported in Algeria by DEUNFF (1977) and is distributed across Europe, reaching China and Australia (KRIŠTOFÍK & DANKO, 2012).

• *Spinturnix myoti* (Kolenati, 1856)

We found this species on *M. punicus* (N=3, NP=34) in Melouane Hammam cave (18 June 2016), on *Rh. blasii* (N=2, NP=4) and *Rh. ferrumequinum* (N=8, NP=3), and in Chiffa tunnels (10 May 2017). **Remarks:** This bat mite has a wide distribution in Europe, North Africa and Asia (KRIŠTOFÍK & DANKO, 2012). It is mostly associated with bats of the genus *Myotis*, but has been reported from other genera as well (STANYUKOVICH, 1997). This mite species was reported from *M. punicus* in Algeria and Libya (BENDJEDDOU *et al.*, 2013, 2017; BENDA *et al.*, 2014; KHELFAOUI *et al.*, 2018).

Order Siphonaptera

• *Araeopsylla gestroi* (Rothschild, 1906)

This flea was collected from *Rh. ferrumequinum* (N=26, NP=1) in Chiffa tunnels, 2 March 2017. **Remarks:** This is a rare bat flea, associated with bats of the genus *Tadarida*, and is distributed in the western and central parts of the Palaearctic (MEDVEDEV & KOTTI, 2012). In Algeria, it has been reported from *T. aegyptiaca* (BENDJEDDOU *et al.*, 2017). *Rh. ferrumequinum* is a new host for this bat flea.

Order Diptera

Family Streblidae

• *Brachytarsina flavipennis* (Macquart, 1851)

This fly was collected from *M. punicus* (N=3, NP=5) in Hammam Melouane cave, 18 June 2016, from *Rh. ferrumequinum* (N=26, NP=3) in Chiffa tunnels, 2 March 2017, and from *Rh. blasii* (N=2, NP=2) and *Rh. ferrumequinum* (N=8, NP=2) in Chiffa tunnels, 10 May 2017. **Remarks:** The main hosts of *Brachytarsina flavipennis* are species of the genera *Rhinolophus* and *Myotis* (HŮRKA, 1962; SCHEFFLER, 2012). In Algeria, it was previously reported from *Rhinolophus* species,

Bat ectoparasites from Chrea National Park, Algeria

M. capaccinii, *M. punicus*, *M. schreibersii* and *T. aegyptiaca* (ANCIAUX DE FAVEAUX, 1976; AMR & QUMSIYEH, 1993; BENDJEDDOU *et al.*, 2017; KHELFAOUI *et al.*, 2018).

Family Nycteribiidae

- *Nycteribia latreillii* (Leach, 1817)

This species was found on *Rh. blasii* (N=2, NP=3) and *Rh. ferrumequinum* (N=8, NP=2) in Chiffa tunnels, 10 May 2017. **Remarks:** *Nycteribia latreillii* has a wide distribution across southwestern Asia to continental Europe and North Africa (HÜRKA, 1964). In North Africa, it was found on *M. schreibersii* in Morocco and Tunisia, and on *M. punicus* in Libya (HÜRKA, 1982). In Algeria, it was first recorded by BENDJEDDOU *et al.*, (2017) in association with five bat species (*M. emarginatus*, *M. capaccinii*, *M. punicus*, *Rh. blasii* and *P. gaisleri*).

- *Nycteribia schmidlii* (Schiner, 1853)

This species was found on *Rh. ferrumequinum* (N=26, NP=8), in Chiffa tunnels, 2 March 2017. **Remarks:** *N. schmidlii* is distributed in southern Europe and North Africa reaching central Asia (HÜRKA, 1964). It was reported on *A. tridens* in Palestine (THEODOR & MOSCONA, 1954) and on *M. schreibersii* in Turkey (ALBAYRAK, 2003). In Algeria, it has been found on *M. schreibersii* (FALCOZ, 1923; AMR & QUMSIYEH, 1993), *Rh. mehelyi* (FALCOZ, 1923; AMR & QUMSIYEH, 1993), *Rh. ferrumequinum* (THEODOR & MOSCONA, 1954), *M. blythi* (AMR & QUMSIYEH, 1993), *Rh. clivosus* (BENDJEDDOU *et al.*, 2017), *R. cystops* (BENDJEDDOU *et al.*, 2017) and *Rh. blasii* (KHELFAOUI *et al.*, 2018).

- *Nycteribia pedicularia* (Latreille, 1805)

This species was found on *M. punicus* (N=3, NP=4) in Hammam Melouane cave, 18 June 2016, and on *Rh. ferrumequinum* (N=26, NP=8) (2 March 2017) and *M. schreibersii* (N=1, NP=1) (10 May 2017) in Chiffa tunnels. **Remarks:** This fly is known to parasitize bat species such as *M. emarginatus*, *M. capaccinii*, *Rh. blasii*, *Rh. ferrumequinum* and *T. teniotis* (THEODOR & MOSCONA, 1954; HÜRKA, 1964; WALTER & EBENAU, 1997). In Algeria, it has been found on *M. schreibersii*, *Rh. euryale*, *Rh. mehelyi* and *M. punicus* (AMR & QUMSIYEH, 1993; BENDJEDDOU *et al.*, 2017).

- *Penicilidia dufourii* (Westwood, 1835)

This species was found on *Rh. ferrumequinum* (N=6, NP=5) in Chiffa tunnels, 7 July 2017. **Remarks:** A wide distribution range of is reported for this bat fly, in Europe, North Africa and Asia, reaching to India (KRIŠTOFÍK & DANKO, 2012). *P. dufourii* is usually associated with bats of the genus *Myotis*, but it has also been recovered from a wide range of other species, including *M. schreibersii* and *Rh. euryale* (HÜRKA, 1980). In Algeria, it was previously recorded from *M. punicus*, *Rh. euryale*, *Rh. ferrumequinum*, *Rh. hipposideros*, *M. schreibersii* and *A. tridens* (THEODOR, 1967; AMR & QUMSIYEH, 1993; BENDJEDDOU *et al.*, 2017).

Bulletin de la Société zoologique de France 142 (2)

• *Phthiridium biarticulatum* (Hermann, 1804)

We found this species on *Rh. blasii* (N=2, NP=2) and *Rh. ferrumequinum* (N=8, NP=3) in Chiffa tunnels, 10 May 2017. **Remarks:** This circum-Mediterranean fly is associated with cave dwelling bats and known to prefer those of the genus *Rhinolophus* ((ŠEVČÍK *et al.*, 2013). In Algeria, this species was previously reported from *Rh. blasii*, *Rh. euryale*, *Rh. ferrumequinum*, *Rh. mehleyi*, *Rh. hipposideros*, *M. schreibersii*, *M. capaccinii* and *M. punicus*, as well as from *E. isabellinus* and *P. kuhlii* (AMR & QUMSIYEH, 1993; BENDJEDDOU *et al.*, 2017; KHELFAOUI *et al.*, 2018).

Conclusion

In summary, this preliminary investigation highlights the diversity of ectoparasite species that are associated with bats in the Chréa National Park. Further researches, involving a wider range of bat species in the area are needed to draw up an exhaustive list.

Acknowledgements

We are grateful to Mr R. Dahel, Director of Chréas National Park, and Dr Z. Harrat, Director of the Pasteur Institute of Algiers, for their collaboration. We also thank the head of the El Hamdania sector and all his team for their help with the fieldwork.
